

Darius Frank

Identity & Access Management (IAM) Specialist · Cloud Security · Security Operations

Denver Metro Area, CO | DARFRA77@GMAIL.COM | dfrank-iam.com | github.com/Dfrank77

Professional Summary

IAM Specialist with hands-on experience in Microsoft Entra ID, Active Directory, and Duo, focused on supporting least-privilege access, Joiner-Mover-Leaver (JML) identity lifecycles, and Conditional Access policies. Builds and publishes open-source IAM security tooling, including an automated privilege escalation scanner that detects shadow admin paths and PIM-eligible role assignments invisible to standard directory role queries. Currently preparing for the SC-300 certification.

Certifications

CompTIA Security+ · SC-300: Microsoft Identity and Access Administrator (In Progress)

Technical Skills

- **Identity & Access Management (IAM):** Microsoft Entra ID (Azure AD), Active Directory (AD), Duo Security, Okta, AWS IAM, Conditional Access, Single Sign-On (SSO), Multi-Factor Authentication (MFA), Policy Configuration.
 - **Identity Governance & Administration (IGA) / Privileged Access Management (PAM):** Joiner-Mover-Leaver (JML) Process, Access Packages (Entitlement Management), User Access Reviews, Role-Based Access Control (RBAC), Entra PIM, Just-In-Time (JIT) Elevation
 - **Security Operations (SecOps):** Cisco EDR, Sumo Logic SIEM, Umbrella, NinjaOne, KnowBe4, ConnectWise – alert triage, incident response, log analysis, vulnerability management.
 - **Infrastructure as Code & Scripting:** Terraform, PowerShell automation, Python, Microsoft Graph API, ARM.
-

Experience

IAM Security Research and Tooling | Feb. 2025 – Present

- Designing and publishing open-source IAM security tools targeting real Entra ID operational gaps, built end to end in Python, Terraform, and the Microsoft Graph API.
- Built a Conditional Access audit engine that evaluates a tenant against the CIS Microsoft 365 Benchmark, generates markdown gap reports, and deploys report-only Terraform remediation for MFA, device compliance, legacy authentication, and sign-in risk.
- Built a privilege escalation scanner that maps admin access inherited through nested group membership and PIM-eligible roles, surfacing users who can activate to Global Admin but are invisible to standard access reviews.
- Built a workload identity risk scanner that audits app registrations and service principals for expiring credentials, orphaned applications, over-privileged grants, and stale admin consent.
- Authored a Terraform module that seeds a lab tenant to ~270 users and 72 applications to test tooling against realistic identity sprawl.
- Working toward the SC-300: Microsoft Identity & Access Administrator certification.

Information Security Specialist (Contractor) | Technology Group Solutions (TGS) | Dec. 2023 – Feb. 2025

- Performed daily incident response across the internal environment: morning sweeps of Cisco EDR, Sumo Logic SIEM, Umbrella, and KnowBe4, investigating alerts, triaging threats, and escalating when necessary.
 - Assisted with Joiner-Mover-Leaver (JML) identity tasks in Entra ID and Duo as needed, supporting the dedicated IT person who handled the bulk of provisioning and deprovisioning.
 - Helped enforce existing Conditional Access policies governing MFA compliance, device compliance baselines, and sign-in risk thresholds.
 - Used VirusTotal, Any.run, and urlscan.io to analyze suspicious files and URLs during investigations. Checked beyond initial quarantine actions to trace root cause on affected hosts.
 - Supported SOC 2 and CMMC compliance through evidence collection, access certification mapping, and security control validation.
 - Worked as a generalist on a 3-person team, assisting across IT, networking, and security functions in addition to primary IR duties..
-

Additional Experience

Hospitality Industry – Leadership Roles (15+ years)

Managed multi-team operations, safety compliance, and crisis response. Communication, cross-functional coordination, and structured problem-solving skills are directly applied to security operations and incident response. Transitioned to cybersecurity in 2023.
